

1

See How They're Made

We love giving tours of our manufacturing facility. Yes, the mill can be a little dirty and not near as pretty as our homes, but it demonstrates the care and craftsmanship that go into a client's project. It's open for a personal tour anytime you are ready. Just let us know.

Five Things You Didn't Know About

Design it Just for You

While we maintain a catalog of standard floor plans, our specialty is working one-on-one with a client to create the perfect home. Our clients can sit down with our in-house Design & Drafting Team to create their own forever home.

3

Timber Frames

Our name might be Honest Abe LOG Homes, but we've been manufacturing post and beam homes since our infancy. Our timber frame homes are easy to erect and competitively priced. Timber frames provide just the flexibility many customers desire.

2

Match it Up On Down the Road

It's common for Honest Abe clients to come back to us to build an addition, garage, pool house or another structure. Thankfully, we run our own mill, so keeping our log profile consistent over the years has never been a problem. Even if a style is discontinued, we save the hardware and always maintain the ability to serve those clients.

We Can Build It

Honest Abe does dry-in and partial labor service in certain areas. The contract is signed directly with Honest Abe – not some third party entity. Where this service is not provided, we assist by striving to maintain a directory of area builders and contractors.
